

type as image

In Illustrator, create a series of three 7.5" x 7.5" abstract designs using only a single typeface for all three squares. For your project, you must choose a typeface that is commonly used. Use only solid colors and do not incorporate "special effects". Consider "contrast" and "order" when making your designs. All square should be unified in your final presentation.

In one square, use only upper case letters.

In a second square, use only lower case letters.

In the third square, use only numbers and special characters.

Save each document to your final projects folder.

Create another image combining all three squares in a vertical or horizontal format. You may do this in Photoshop. Upload the final image that contains all three squares to your website. Be sure your image color mode is RGB and shown correctly on your weebly site. If you are having trouble uploading your image onto weebly, you may want to resize your image to a smaller resolution.
