

# Perspective Project

## Part 1

On one page in your sketchbook, create 3 small thumbnail ideas for your perspective project. Show to Mr. McCray for a daily grade.

**\*Be sure your idea contains cube like shapes to create a clear representation of perspective.**

## Part 2

In Illustrator, create an 8.5"x11" document of a scene showing architectural elements and a clear representation of one point or two-point perspective. Use the perspective grid and the perspective grid tool in Illustrator. Use the perspective grid in Illustrator to assist with your project.

Your image must contain

A least one FOREGROUND element – (The element is about 3 feet away.)

A clear middle ground and background

Gradients

Complex imagery and detailed elements

Do not use photographic elements. All objects must be completely original and created by you.
